

PuraSys[®] SBR

Sequencing Batch Reactor

The PuraSys SBR brings the reliability of proven Sequencing Batch Reactor (SBR) technology to the residential market and can be scaled up for commercial applications. It transforms an ordinary septic tank into a compact, advanced treatment unit. The PuraSys SBR offers a modular solution for space constrained sites or nutrient limited watersheds.

PuraSys^{SBR}

The PuraSys SBR batches treatment through cycles, including aerobic and anaerobic steps, to clean the water and reduce total nitrogen.

Since the process is batched, the smart control can recognize water flow and then adjust aeration accordingly. This not only saves energy, but also improves treatment efficiency and avoids bulking.

Applications

- Residential new construction
- Retrofit existing septic tanks
- Commercial or community
- Small commercial operations
- Nitrogen sensitive areas
- Very small properties

Why Choose PuraSys SBR?

- Certified to NSF/ANSI Standards 40 and 245
- Can be dropped into a standard septic tank
- Simple system uses no chemical additives, filters or fixed media
- PuraSys SBR can be installed through a standard 24" or 30" tank access port
- Smart control panel which automatically adjusts aeration to water flow based on occupancy
- Process control saves energy and prevents sludge bulking caused by over-aeration
- Only input is air which makes operation and maintenance easy

Locally supplied tank option

Mike Series

IM Series

Only modules bearing the NSF® logo and designated PS1-XX are certified to NSF/ANSI Standards 40 and 245
